REGULATIONS OF THE UNDER GRADUATE CHOICE BASED CREDIT SYSTEM (UGCBCS) GAUHATI UNIVERSITY, 2019

(AS AMENDED ON 8/11/2019)

1. THE CHOICE BASED CREDIT SYSTEM (CBCS)

The Choice Based Credit System is the logical next step in a credit based semester system becoming more learner-centric. A CBCS offers the student a diversity of courses to choose from and the autonomy to decide on the place, pace and time of learning. The UGC has recommended that it is desirable for all institutions of Higher Education in the country to move to a CBCS and, together with it, implement a uniform grading system.

2. UNDER GRADUATE CBCS (UGCBCS) PROGRAMMES

The undergraduate degree programme in the CBCS will have courses spread across six- semesters. A typical semester will comprise a minimum of 15 to 18 weeks of academic work that will translate into 90 actual teaching days. Two consecutive (one odd and one even) semesters will make up an academic year. An UG course shall be of Six Semesters covering three Calendar Years (Academic Sessions – June to May). The duration of the Odd Semesters (First, Third and Fifth) shall be 'June to November', and that of Even Semesters (Second, Fourth and Sixth) shall be 'December to May'.

The dates and duration mentioned in the academic calendar concerned will be in consonance with the above schedule as far as practicable.

Each student must take admission in three consecutive Academic Sessions starting with the first semester. Students who do not enroll in the Second Academic Session will not be eligible to take admission in the Third Academic Session.

The minimum time requirement to acquire an undergraduate degree will be three years. The maximum time allowed to complete the programme will be six years.

10.2 Evaluation: A student's performance will be evaluated throughout the year based on continuous assessment. Evaluation of the student's performance in each semester for every course will be based on the following:

- Internal Assessment (IA)
- End Semester Examination (ESE)

For a student to pass in a course, she/he has to pass on the basis of the marks secured in TOTALITY in both Internal Assessment and End Semester Examination.

10.2.1 Internal Assessment (IA): IA will ideally account for 20% of the total marks allotted to a course/paper. For evaluating the performance of the students in a continuous way, the following measures will be adopted for distributing marks earmarked for IA.

10.2.1a Sessional or mid-term examination will be conducted for 50% of the total marks allotted for IA of a course/paper. (For example, if 20 marks is allotted for IA of a course/paper, then 10 marks will be kept aside for assessment in sessional or mid-term examination. The sessional examination will be held for 30 marks for the convenience of setting questions and covering the syllabus and the marks secured by the students will be proportionately converted to be out of 10 marks. Duration of the examination will be one hour. The question papers of the sessional or mid

term examinations will be set by the concerned teacher(s) and the evaluated answer scripts will be shown to the students and corrections will be made, if any.

10.2.1b 20% of the marks allotted for IA will be awarded to the students based on class attendance. If the total marks for IA is 20, then 4 marks will be awarded to the students based on class attendance. The following criteria will be adopted for awarding marks under this category:

- Class attendance from 76% to 80%..... 1 mark;
- Class attendance from 81% to 85%..... 2 marks;
- Class attendance from 86% to 90%..... 3 marks;
- Class attendance from 91% and above..... 4 marks.

10.2.1c Rest 30% of the marks allotted (i.e. 6 marks) for IA will be distributed and awarded on the basis of performance of the students on the following criteria:

- for Practical Courses: Practical (internal practical including practical copy)
- For non-practical courses :
Home assignments; Seminar/Group discussions; Field work; Performance in co-curricular and extra-curricular activities.

10.2.1d Internal marks will be scaled up/down to ensure a maximum permissible deviation of 20 percent from ESE marks. Thus, internal marks can deviate only within the mark band of % marks secured in ESE plus/minus 20 percent.

10.2.1e In case of ODI, learners admitted under GUIDOL, IA will ideally account for 20 % of the total marks allotted to a course (in a manner similar to conventional mode students) and will be distributed as follows

- Sessional or Mid-term examinations will be conducted for 50% of the total marks allotted for IA of a course (in a manner similar to conventional mode students)
- Rest 50% of the marks allotted for IA will be distributed and awarded on the basis of performance of students on the following criteria (in a manner similar to conventional mode students)

Paper: ECO 1036 (Quantitative Orientation)

Total Marks: 20 Time: 1 hour
5x2=10

1. Answer the following questions (any two):

(a) What must be matrix X if $2X + \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} = \begin{pmatrix} 3 & 8 \\ 7 & 2 \end{pmatrix}$?

(b) If the trace of the matrix

$$A = \begin{pmatrix} X-5 & 0 & 2 & 4 \\ 3 & X^2-10 & 6 & 1 \\ -2 & 3 & X-7 & 1 \\ 1 & 2 & 0 & -2 \end{pmatrix}$$

Assumes the value zero, then find X.

(c) Maximize the function $y = 5x_1x_2$ subject to $x_1 + 2x_2 = 8$

(d) Find the Inflection points of $f(x) = -2x^3 + 6x^2 - 10x + 5$

(e) Define derivative

2. Answer the following questions (any one): 10x1=10

(i) Prove that for an input coefficient matrix A, $(I-A)^{-1} = I + A + A^2 + A^3 + \dots$

(ii) Explain the rows and column of an input-coefficient matrix. 7+3=10

b) Given the utility function $U = 2x + 2y - xy$ and the budget constraint $4x + 6y = 94$, find out the equilibrium purchase of x and y in order to maximize total utility.

(c) The average revenue (AR) and total costs (TC) functions of a monopolist are given by

$$AR = 100 - 2Q$$

$$TC = 50 - 4Q + 2Q^2$$

The government also imposes a specific sales tax of Rs. 8 per unit of output. Explain the effect of tax on equilibrium output and profit. 5+5=10

(d) A discriminating monopolist is able to separate its customers into two markets with respective demand functions as

$$X_1 = 16 - 0.2p$$

$$X_2 = 90 - 0.05p$$

The total cost function of the monopolist is $C = 20 + 20X$, where $X = X_1 + X_2$.
